

Company Profile

With the world shrinking and geographies turning seamless, it has become imperative for this generation of millennials to have that one upside over their peers – international exposure. And this exposure is what inspires them to be not only better versions of themselves, but also be better prepared in case they decide to walk down a similar path.

We, at Trip Suppliers, realized this early...

Our collaborators are none other than the alumni of historically established prestigious institutions like Harvard and Yale. How they wish that they could have known beforehand, what was to be expected culturally, socially and academically. How they wish they could have hit the ground running...

With over 350 enlightened students from India, each one of them happily showing off their prestigious certificates, we can proudly say that our program is indeed bespoke and unique.

We are the official, and only representatives of Harvard University (Certificate attached) in India for conducting workshops especially designed for school students. Apart from these workshops in the Boston Campus, we also take students to visit the iconic Massachusetts Institute of Technology (MIT) and Yale universities. The visits help students get first-hand information and a complete overview on many aspects of studying and living at one of the best universities in the world. The visits include an orientation lecture at the Admissions Department followed by a student led tour of the campus. Some of the top performing students share their personal stories, which are immensely inspiring to say the least. The students are also given Certifications from Harvard University and for 2 workshops at MIT on Robotics (by using Lego Mindstorm Kits) and DNA Structuring/Structural Engineering (by using Lego Kits).

The Avalon Space School, an initiative from Avalon Educon, provides a global dimension to the overall education of students. Space science and robotics have always fascinated students of all ages, especially now as it has recently emerged as one of the most revered professions in the educational ecosystem. Indubitably, one needs the requisite knowledge, skills & attitude to excel; and through our international programs, we strive to instill these qualities in every student so that they are well prepared to not only dream, but also to realize their dreams.

Our distinctive NASA tour validates a special mention here. This tour takes you to the space shuttle Atlantis, explore the areas of NASA's Kennedy Space Center, and meet a veteran astronaut to discover firsthand how a trip to the visitor complex can enrich every student's education. Our stellar Certification Program in Astronaut Training Experience (ATX) immerses participants in the world of astronaut training. In addition to the authentic mission simulators like the Multi-Axis Trainer and the Micro-Gravity Wall, trainees will also perform a real space shuttle mission simulation within a full-scale, realistically outfitted mission control mock-up.

Creativity and innovation touch peaks at the Full Sail Labs located at the Full Sail University in Orlando (Florida). Avalon helps instill a passion for creating innovative and engaging environments for learning creative skills, and just like the main Full Sail University campus, we are absolutely at par with the best creative spaces in the world.

Students undergo rigorous workshops on 3D Game Design OR Minecraft, where they use Raspberry Pi, a credit card sized computer for programming, OR a workshop on Music Production. All this comes with valid and duly earned certifications. For your immediate reference, the details of the program are attached.
